

AI Agents Are Gaining Action. Not Accountability.

Every action needs authority. Every consequence needs trust.

AI gains agency. Agency requires trust.

Trust requires infrastructure.

We build that infrastructure

CONTROL TOWER BY ARCHEPERSONA

The Next AI Risk Is Not Bad Answers. It Is Unauthorized Actions.

AI agents now act independently — not just recommend. The infrastructure to authorize those actions does not yet exist.

Send Emails

Communicate on behalf of the organization

Spend Money

Execute financial transactions autonomously

Update CRM

Modify customer records without oversight

Deploy Code

Push changes to production systems

Access Enterprise Systems

Interface with internal databases and tools

Call External APIs

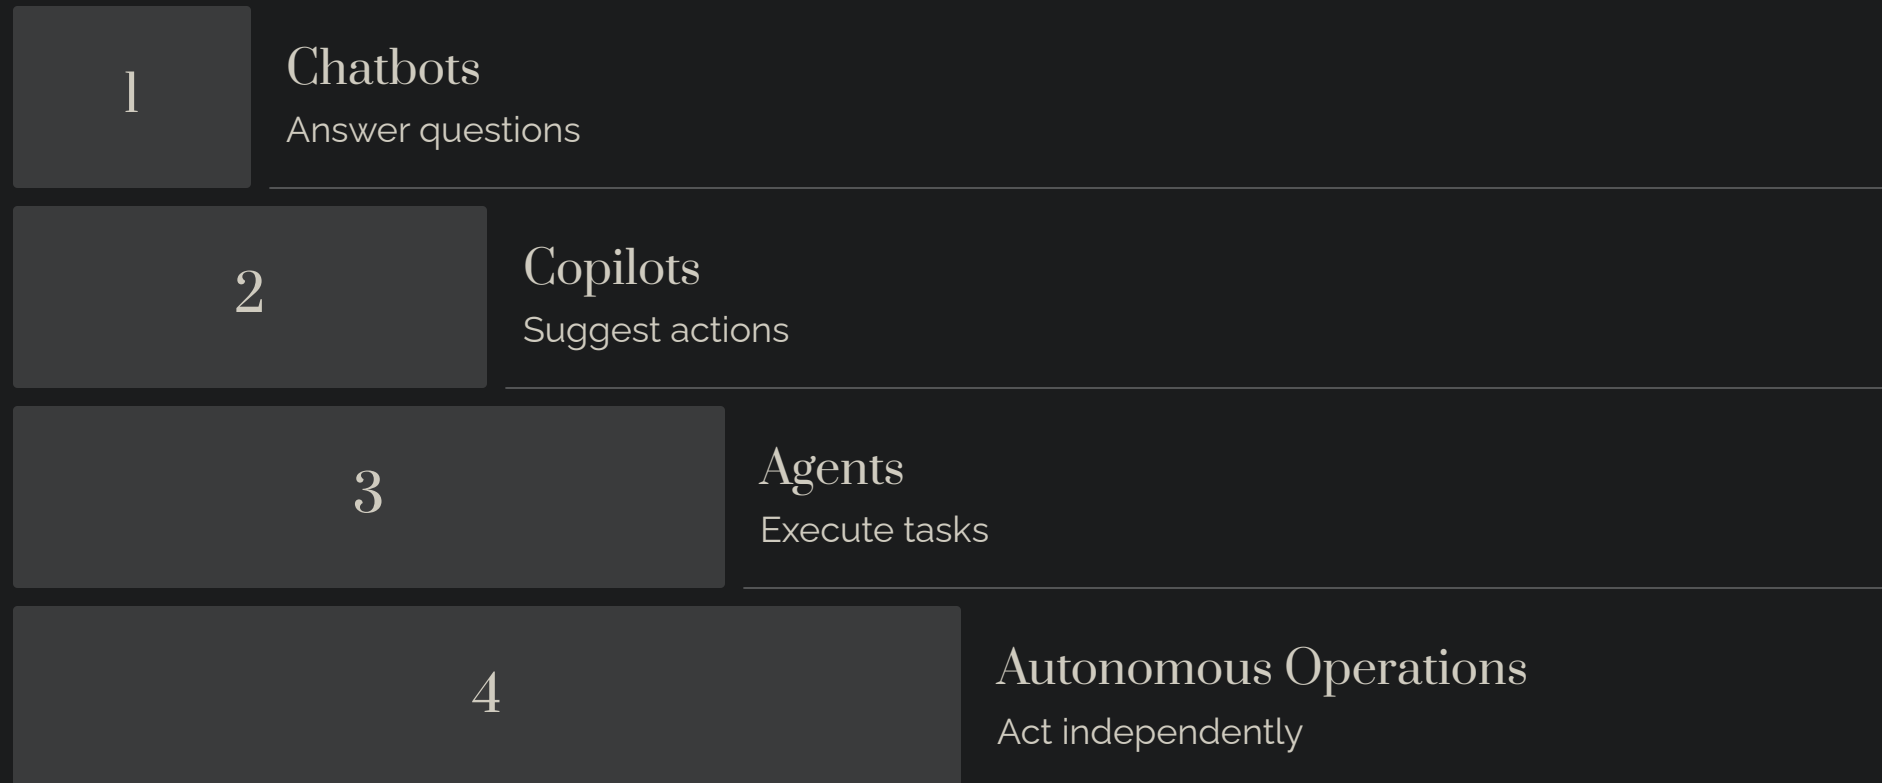

Trigger third-party services and integrations

Businesses have monitoring. They do not have **runtime authorization**. Somebody is going to **pay** for that **gap**.

Every Leap in Autonomy Demands a New Layer of Authorization.

RISK LEVEL →

Each increase in AI autonomy expands the **blast radius** of **unauthorized actions**.

The infrastructure layer has **not kept pace**.

CONTROL TOWER Is the Runtime Authorization Layer for Autonomous AI.

CONTROL TOWER sits between AI agents and enterprise systems — enforcing policy, requiring approval, and logging every action before execution. Built on the ARCHE platform.

Pre-Execution Control

No action reaches an enterprise system without passing an authorization gate

Policy Enforcement

Rules are defined once, applied universally across every agent and workflow

Human-in-the-Loop Approval

High-risk actions route to authorized reviewers before execution

Audit Trail

Every decision, approval, and action is logged and traceable

How CONTROL TOWER Works.

01

Agent Intent

AI agent proposes an action.

02

Policy + Cost + Authority Check

CONTROL TOWER evaluates rules, spend, authority, and trust history.

03

Authorization Decision

ALLOW / HOLD / DENY / ESCALATE

04

Execution or Review

Approved actions proceed. Risky actions route to human review.

Nothing executes without authority.

The ARCHE Platform.

CONTROL TOWER is the first product built on ARCHE — ArchePersona's broader infrastructure platform for AI trust and authorization. The full platform roadmap extends the authorization layer across the AI lifecycle.

CONTROL TOWER

Runtime authorization layer for autonomous AI actions

A Large, Emerging, and Underserved Market.

Every enterprise deploying autonomous AI agents will require a runtime authorization layer. The category is forming now. Early infrastructure entrants define the standard.

- Enterprise AI agent adoption accelerating across every vertical
- No established category leader in AI runtime authorization
- Regulatory pressure increasing around AI accountability
- Security and compliance teams lack tooling for autonomous actions

PRE-SEED

COMMERCIALIZATION

\$500K Pre-Seed to Commercialize Runtime Authorization

Moving CONTROL TOWER from alpha-ready to beta release — and from technical validation to commercial validation.

\$500K

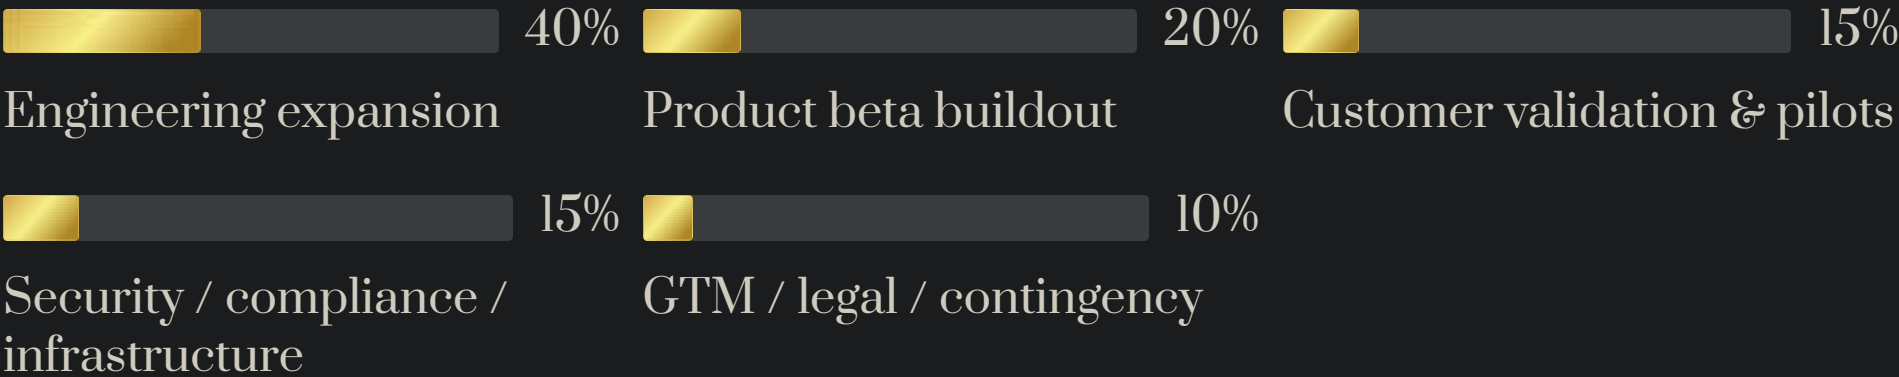

Raise: Complete beta buildout, validate enterprise design partners, and prepare CONTROL TOWER for paid pilots.

Pricing

1	\$499/month Up to 5 agents	1	~\$2,000/month Up to 250 agents
---	-------------------------------	---	------------------------------------

Up to ~\$24K ARR per scaled customer

Use of Funds

Goal: beta release, design partners, paid pilots, and investor-ready commercial traction.

Founder-Led. Operator-Supported.

Lean team. Real architecture. Financial oversight established.

Darren Hall

Founder / CEO / Chief Architect

Built CONTROL TOWER and the ARCHE architecture from product concept through working alpha.

Ted May

Board Member / Fractional CFO

25-year business and financial consultant supporting financial planning, investor readiness, company operations, and capital strategy.

Jason Hoke

Board Member / Fractional COO

Multi-location operator with ownership experience across 17 Adam & Eve retail stores in North Carolina.

Brad Bonneville

Board Member / Business Advisor

Owner of Bonneville Electric in Carrboro. Supports business strategy, operator perspective, and local founder advisory.

Founder-built architecture. Financial oversight established. Operator support in place.

AI Gains Agency. We Build the Infrastructure to Authorize It.

CONTROL TOWER is the runtime authorization layer for autonomous AI. The category is forming. The window for infrastructure-grade entrants is open now.
